-I. FUNCTION: Subtilisin is an extracellular alkaline serine protease, it catalyzes the hydrolysis of proteins and peptide anides.

-I. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity for peptide bonds, and a preference for a large uncharged residue in P1. Hydrolyzes peptide amides.

-I. COPACTOR: Binds 2 calcium ions per subunit.

-I. SUBCELLULAR LOCATION: Secreted.

-I. BICTECHNOLOGY: Used as a detergent protease. Sold under the name Savinase by Novozymes.

-I. MISCELLANEOUS: Secretion of subtilisin is associated with onset of sporulation, and many mutations which block sporulation at early

1- COFACTOR: Binds 2 calcium ions per subunit.
1- SUBCELLUIAR LOCATION: Secreted.
1- SIMILARITY: Belongs to peptidase family 58.

The optimal temperature for its caseinolytic activity is 80 degrees Celsius.

-!- SUBCELULAR LOCATION: Secreted.
-!- DEVELOPMENTAL STAGE: Secreted from the early stationary phase until the time the cells cease to grow.
-!- PTW: THE N- AND C-TERMINAL PRO-SEQUENCES ARE REMOVED THROUGH THE PROTEOLYTIC ACTIVITY OF AQUALYSIN I ITSELF, IN THAT ORDER. THE C-TERMINAL PRO-SEQUENCES ARE REMOVED THROUGH THE PROTEASES ACROSS THE OWNER MEMBRANE.
-!- PTM: Two disulidade bonds are present.
-!- SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10.9%; Score 245.5; DB 1; Length 513; 26.0%; Pred. "Purification and properties of an alkaline protease from
alkalophilic Bacillus Sp. KSM-Ki6.";
Appl. Microbiol. Biotechnol. 43:473-481(1995).
-!- COFACTOR: Binds 2 calcium ions per subunit.
-!- SIMILARITY: Belongs to peptidase family S8.
PDB; 1MPT; 22-JUN-94.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protease; Metal-binding; Calcium-binding;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

New modified alkaline proteases useful in detergent compositions

Claim 5; Page 20-21; 25pp; English.

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency \$ (34 - 38*) compared to prior art alkaline proteases (31 and 23*). This sequence represents a fragment of the alkaline protease A-2 from Bacillus sp NCIB12513 described in the method of the invention

This is the amino acid sequence of a novel protease of Bacillus sp. JD170 (NCIB 12513), as deduced from the nucleotide sequence of an isolated gene consequence and solated sequence of an isolated gene at Section 2. The section is protein, including the signal peptide and preprior region, has 77% identity to alkaline protease Y (see AAM89548) from Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease. The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins of the senanced stability towards oxidation under alkaline conditions, it has enhanced stability towards oxidation under alkaline conditions, it is towards bleaching agents of the peroxy type. The invention also provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            628
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        328

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠ
                                                                                                                                                                                     This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 22$). This sequence represents a fragment of the alkaline protease KP43 from Bacillus sp strain KSW-KP43 which is used to create the modified protease represented in AAMS0091
                                                                                                                                                                                                                                                                                                                                                                                   119
                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     506
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to alkaline proceases produced by strains of Bacillus. The proceases ability to digest casein is not inhibited by older caid and they have a high stability to oxidising agents. The is active over the phrange 4-13 and has the following properties: (a) it is active over the phrange 4-13 and has at least 80% of its optimum activity over the phrange ph 6-12; (b) after 30 minutes at 40 deg; C it is stable over the phrange 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proceases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing compositions for use in automatic dishwashers bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 566
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to diget casein is not inhibited by oles acidlus. The protease a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by 809-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 28%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9860 from Bacillus sp strain KSM-KP9860 described in the method of the invention

The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-1 from Bacillus sp NCIB12289 described in the method of the invention

The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 9+6.12, (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11, (c) its isoelectric point is 8.9-9.1, (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGS. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidiaing agents allows the bleaches. The present sequence represents an alkaline protease of the invention. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    325
                                                                            Bacillus. The processes ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline processe of the invention has the following agents. The is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11, (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11, c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has noclecular weight about 43,000 by SDS-PAGE. The alkaline processes can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PNGNQGWGRVTLDKSLNVAFVNETSPLSTSQKATYSFTAQAGKPLKISLVWSDAPGSTTA

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the
                                                                                                                                                                                                                                                               387 TVGATENIKPSFGSYADNINHVAQFSSRGPTKDGRIKPDVMAPGTXILSARSSLAPDSSF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NANDPNGHGTHVAGSVLGN-ATNKGMAPQANLVFQSIMDSGGGLGGLPANLQTLFSQAYS 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to exidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease of the invention. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                              d
                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                          This is the amino acid sequence of a Bacillus sp. alkaline protease Y that is said to have good alkali and surfactant resistance and improved detergency. It shows 7% identity to a newly isolated protease (see AAW8547) of Bacillus sp. JP10 (NCIB 12513). The invention provides cortors, recombinant host cells and methods for the recombinant proteases. The protease are used in laundry and ishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the for leather processing, as well as for debittering and enhancing the chrough hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins, rey towards bleaching agents of the corroxy type. The invention also provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease Ya from Bacillus sp strain Y-(FERM BP-1029) described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360

Ya enzyme is excellent in alkali resistance and surface active agent resistance and improves detergency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             361 YTLVNDLDLVITAPNGQKYVGNDFSYPYDNNWDGRNNVENVFINAPQSGTXIIEVQAYNV 420

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
